Lighting Surge Protector

1. To use a Lighting Surge Protector, you need an additional cable (nm / nm) and a copper wire in addition to a lightning arrester
2. The protector is used between the outdoor antenna and the booster, usually near the booster end;
3. The protector is installed outdoors and cannot be close to buildings, especially metal objects;
4. The grounding wire of arrester shall be copper wire with diameter not less than 2.5mm;
5. Grounding copper wire should be connected to underground, not to metal water pipes and other outdoor equipment;
